SUMMARY

Full-stack engineer with 2 years shipping complete products rather than slices of them: schema, API, interface, authentication, and deployment. React and Next.js on the front, Python (FastAPI) and TypeScript on PostgreSQL behind it, plus cross-platform mobile in Flutter. Available for fully remote work.

PROFESSIONAL EXPERIENCE

Full-Stack Software Engineer, Independent Contract | Remote | September 2024 - Present

- Built real-time video and messaging for LearnMate, a cross-platform tutoring app used by WMSU undergraduate researchers, designing the Firebase data model, role-based authentication, and the WebRTC signaling layer. (Dart, Flutter, Firebase)
- Delivered on-device wood knot detection as sole engineer for AdZU undergraduate researchers by training a YOLOv8 model on 12,000 images and shipping the full ONNX-to-TFLite inference pipeline. (Python, TensorFlow Lite)

IT Specialist, M. Abubakar Construction and Engineering | Zamboanga City, Philippines | June 2025 - June 2026

- Cut document and certificate reconciliation from three days to under four hours by replacing a shared-spreadsheet process with a normalized PostgreSQL tracking system, authenticated across three user tiers with role-based access control.
- Eliminated 15+ hours of weekly manual data entry across a 50-employee payroll cycle by building a Python desktop application (PyQt6) that automated statutory deductions, contribution computations, and payslip generation end to end.
- Served as sole developer on both systems, from relational schema design through application code, rollout, and support for non-technical staff.

Software Developer Intern, Regional Trial Court, Region 9 | Zamboanga City, Philippines | August 2024 - April 2025

- Kept court operations running for 10+ daily staff through repeated network outages by building an offline-first desktop client with automated cloud synchronization.
- Reconciled 1,000+ legal records after outages with zero data loss by engineering bi-directional sync with conflict resolution between offline clients and the live database.

PROJECTS

Enterprise Payroll Web Application | Next.js 14, React 18, TypeScript, FastAPI, PostgreSQL, TailwindCSS

- Delivered BIR TRAIN Law-compliant payroll across semi-monthly, weekly, and daily frequencies by building a tax engine implementing the 2023 revised schedules with 2025 SSS, PhilHealth, and Pag-IBIG contribution tables.
- Secured employee and bank data at rest with AES-256 field encryption, JWT authentication with bcrypt hashing, RBAC on every protected REST endpoint, and an immutable audit trail.

Coupleledger | Dual-layer household ledger (React 18, TypeScript, Vite, TailwindCSS)

- Designed a dual-layer access model enforcing strict data isolation between two roles on a shared workspace, with every write validated and audit-logged before commit to prevent cross-role data leakage.

SyncSolve API | Stateless conflict-resolution engine for offline-first sync (Python, FastAPI, Docker, Kubernetes)

- Resolves sync conflicts at field and document level using vector-clock causality, returning HTTP 409 with RFC 6902 JSON Patch deltas; ships with a pytest suite, OpenAPI docs, structured JSON logging, Prometheus metrics, and Kubernetes manifests.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Dart, SQL, PHP, HTML/CSS

Frontend: React 18, Next.js 14, TypeScript, TailwindCSS, Vite, Flutter, PyQt6, responsive UI, WebRTC

Backend and Data: FastAPI, PostgreSQL, MySQL, SQL Server, Firebase, REST API design, relational schema design, JWT, RBAC

Tools and Practice: Git/GitHub, Docker, Kubernetes, pytest, OpenAPI/Swagger, Linux, Agile/Scrum

EDUCATION

Mapua University, Master of Engineering in Computer Engineering (in progress) | 2026 - Present

Western Mindanao State University, BS Computer Engineering | Zamboanga City | August 2021 - May 2025

GPA: 1.71 (1.00 = highest; first-class range)

CERTIFICATIONS

Civil Service Professional Eligibility (CSC) | Data Associate Pathway (DAP), 2025 | Networking Basics and Python Essentials 1 (Cisco), 2025
